

Problem 5.

Let $f(x) = 1 - |1 - 2x|$. Find the number of solutions of the equation
 $f(f(f(f(f(f(f(f(f(f(x)))))))))) = x$.

Пусть $f(x) = 1 - |1 - 2x|$. Сколько решений имеет уравнение
 $f(f(f(f(f(f(f(f(f(f(x)))))))))) = x$?

? $f(f(f(f(f(f(f(f(f(f(x)))))))))) = x$. $f(x) = 1 - |1 - 2x|$.
